

Thermal Process Upgrades

Honeywell

One Honeywell, Unlimited Solutions

It has been three years since Honeywell Process Solutions (HPS), home to Honeywell's industrial control devices including the HC900 Process Controller, ControlEdge PLC, Smartline Transmitters, and Experion SCADA/DCS, welcomed their partner division, Honeywell Thermal Solutions (HTS) into their portfolio of products. Honeywell Thermal Solutions specializes in combustion control and safety devices, including the SLATE burner management system and Honeywell/IRIS flame scanners as well as thermal field instruments from Maxon, Eclipse, Hauck, and Krom Schroder.

The combining of these Honeywell divisions allows GTH to design an integrated Honeywell solution for virtually any combustion / process application. In addition to instrumentation and field automation, we can also provide custom UL 508A or 698A control panels as well as field programming and system start-up. Concerned about recent AQMD and NFPA requirements? Our Account Managers are knowledgeable on the latest rules and can assist with compliance retrofits!

Honeywell Process Solutions

- Experion SCADA
- ControlEdge PLC
- ControlEdge HC900
- SmartLine Transmitters
- Recorders & Data Acquisition
- Panel Mounted Controllers & Programmers

Honeywell Thermal Solutions

- SLATE Burner Management
- Eclipse Burners
- Maxon Burners & Valves
- Krom Schroder Valves & Regulators
- Iris Flame Detectors
