## Honeywell

### Honeywell OneWireless

With its robust infrastructure, integrated cyber-security, and scalable design, the Honeywell OneWireless system is the smart choice for industrial networking. The OneWireless technology allows for the seamless extension of the process control network in the field with devices such as process transmitters, CCTV security systems, and XYR 6000 transmitters, as well as other instruments using Modbus (serial and TCP/IP), OPC UA, OPC DA, HART (serial and IP) and WiFi.

#### Product Advantages:

- High performance
- Cost effective
- Versatile, flexible, and scalable
- ISA100 Wireless, Wireless HART, and Wi-Fi supported
- Easy to commission and maintain system

In November 2019, Cisco and Honeywell partnered together to move Honeywell's wireless network into the world of IIoT. The new OneWireless module developed by Honeywell offers increased connectivity, speed, and security via the Cisco Catalyst IW6300 Heavy Duty Series Access Point, allowing the extension of process control networks in the field.
