

What is New in the Updated AMS2750F?

The AMS2750 specification covers pyrometric requirements for thermal processing equipment used for heat treatment. It applies to temperature sensors, instrumentation, thermal processing equipment, system accuracy tests, and temperature uniformity surveys.

The **updated AMS2750F** was released in June 2020. It outlines several specific changes relating to thermocouples and instruments that integrate with the Nadcap pyrometry reference guide requirements.

Digital Recording Requirements

Of note, is the new requirement that all recording devices must be digital and have readability of 0.1 degrees F by June 2022.

Honeywell offers a number of recording options to meet this criteria. The **DR graphic recorder** is a seamless upgrade from traditional paper recorders with the following benefits:

- Quick visualization and documentation of your process
- Faster data analysis
- Better access to secure data
- Data encryption
- AMS2750F compliant

Thermal Process Retrofits & Field Services

Heat Treaters work with critical temperature control requirements as well as strict documentation and compliance requirements. GTH has executed thousands of heat treat projects and system retrofits over our 80+ years. We have exclusive access to the full Honeywell Process and Thermal Solutions portfolio in California, Nevada, and Arizona.

Field Services

Our Field Technicians and Engineers are prepared to assist with a wide range of onsite or in-house industrial services.

Paperless Recorders
and Data Acquisition Solutions

Honeywell Digital Recorders

Honeywell offers a broad product portfolio of data acquisition products to address most industrial recording needs.
