

# Honeywell

## The New Honeywell UDC2800 Temperature Controller

### Next Generation Technology

The new UDC2800 controller is a modern, powerful, and user-friendly solution for single loop control of furnaces, ovens, boilers, environmental chambers, and more. It raises the bar on panel-based controllers with greater connectivity, improved accuracy, and enhanced performance. Upgraded features include:

- Bluetooth and remote connectivity
- App-based configuration options
- Full color TFT screen

### Specifications

The UDC2800 delivers 0.15% accuracy and a market-leading scanning speed of 100ms to capture trends quickly. It supports up to 64 setpoints and four PID sets with multiple input options including RTD, TC, mV, mA, RH, carbon, and oxygen.

### Control Panel Retrofits

GTH has UL panel shops in both California and Nevada. Our team offers design-build services for panel retrofits as well as programming and system integration support. Let us modernize your existing control system with the latest in instrumentation & software technology!

### Questions?

Please contact our Customer Service team to learn more!

#### UL Control Panel Services

We manufacture custom control panels out of our two UL panel shops in California and Nevada.
